DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 9/26/2007 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bella (6,181,775).

Consider claims 1 and 7, Bella teaches a system and method for testing subscriber lines, comprising a broadband line testing control module and a remote terminal subscriber access control module located at a subscriber line between the broadband line testing control module

and a remote terminal unit (see Fig. 6 and Fig. 7), wherein said broadband line testing control module sending a signal of disconnecting the subscriber line to the remote terminal subscriber access control module, and testing the subscriber line; said remote terminal subscriber access control module receiving said signal from the broadband line testing control module, and controlling the remote terminal unit to disconnect from or connect to the subscriber line based on said signal (see col. 8 lines 10-37).

Consider claims 2-3, Bella teaches the claimed features (see col. 8 lines 25-53).

Consider claims 4, 10-11, Bella teaches the claimed features (see col. 9 lines 17-28; col. 10 lines 6-11).

Consider claim 5, Bella teaches the claimed feature (see Fig. 7).

Consider claims 6 and 12, Bella inherently teaches the claimed features since a Digital Subscriber Line Access Multiplexer (DSLAM) must be in place in order to provide and/or testing of DSL services.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bella (6,181,775) in view of Ginesi et al (2003/0063711).

Consider claims 8 and 9, Bella disclosed that the request signal may take any number of forms (see col. 3 lines 25-28). However, Bella did not specifically suggest wherein the signal is

transmitted through a message based on G994.1 protocol and sending a handshake message to the remote terminal unit prior to the step of sending a disconnecting signal of disconnecting subscribe line. However, Ginesi et al suggested such (see paragraphs 0005-0008; it should be noted that the G994.1 is one of a version of the xDSL ITU standard). Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate the teaching of Ginesi et al in order initialize communications prior allow or perform any communications (i.e., standard procedure in xDSL communications).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
